

# HYDRAULIC FILTRATION SYSTEMS AND ACCESSORIES

Strainers, Diffusers, Spin-On  
Filters, Pressure Filters and more

Zinga's product line features suction strainers and diffusers, spin-on filters heads (single and modular), in-tank filters, high pressure filters (cartridge and spin-on), cellulose and synthetic elements, check valves, gauges and reservoir accessories.

## Spin-On Filter Heads

Zinga offers the most extensive line of Spin-On filter heads in the industry. Spin-on filters are commonly used on return line low pressure applications and in some pump suction applications.

Zinga spin-on filters can be found in mowers, tow trucks, truck mounted aerial lifts and cranes, pavers, compactors, wood splitters and chippers, trenchers, and UTV's. The Spin-On filters are available with cellulose, fiberglass, or wire mesh elements with pressure ranges up to 250 PSI.

## Pressure Filters

Zinga Pressure Filters are available in cellulose and fiberglass elements and are commonly used in-line prior to the valve in any hydraulic circuit requiring filtration to protect critical valve components. Pressure filters range from 1200 to 6000 PSI and can be found in tractors, road machinery, trenchers, cranes, and industrial machinery.

Zinga provides a full range of hydraulic oil filtration components to numerous mobile equipment markets providing protection to critical pieces of equipment in construction, agriculture, utility, refuse, mining, highway wrecker services, lawn and garden and more.

### Tank-Top Filters

Tank-Top Filters are available with cellulose, fiberglass, and wire mesh elements for return line low pressure applications ranging from 100 to 500 max PSI found in refuse trucks, tow trucks, truck mounted aerial lifts and cranes, compactors, pavers, industrial machinery, and agricultural equipment.

### Strainers

Equipment manufacturers apply strainers to keep large objects from flowing into the pump and damaging down line equipment.

### Breathers

Zinga also offers tank mounted filler breathers for use on any hydraulic reservoirs found on mowers, tow trucks, truck mounted cranes, pavers, compactors and more.

# LEADING THE WAY IN MOBILE FILTRATION

As a part of Filtration Group, Zinga is a global leader in filtration for agriculture and construction providing filtration and reservoir accessory product solutions for the mobile hydraulic market. We lead the industry in developing extensive product lines for filtration solutions that improve oil cleanliness, maximize performance and meet warranty levels for reliability.

We are a leading manufacturer of hydraulics filtration products, including strain-ers, diffusers, spin-on-filters, pressure filters and other filtration accessories.

Zinga's 110,000 square foot facility features manufacturing process capabilities in engineering, aluminum die casting, machining, steel fabrication, filter element assembly and silk screening.
